

High Performance Air Operated Piston Pumps

<https://ap.yamadacorp.co.jp/>

Pump Selection Guide

The Yamada Piston Pump Series was designed with a wide variety of applications in mind. Therefore when selecting the correct pump, many factors must be first taken into account. The pump's materials of construction, the size and ratio of the air motor, the material to be pumped, chemical compatibility, viscosity and density. Also the conditions effecting the pump and piping system. For example, what is the height, length and diameter of the pipe. What are the inlet and outlet pressures and the required output volume?

The entire Yamada Piston Pump Series is classified in the general below table. While also taking into account the above conditions, use this chart when selecting your pump.

For more information please contact your nearest Yamada Pump Dealer or Yamada Corporation directly.

LOW PRESSURE SUPPLY PUMPS

Inline Pumps. (Steel)

For lubricants similar to engine oils, gear oils and machine oils etc. Generally the material must provide a certain amount of lubrication, be non-corrosive and have a low viscosity.
<Ex.> Engine oil, Gear oil, Machine oil, etc.

Divorced Pumps. (Steel)

For fluids that are air-drying like paints and certain chemical solutions. The material must provide a certain amount of lubrication, be non-corrosive and have a low viscosity. Different packing materials may be required depending on the application.
<Ex.> Paint, Chemical solution, etc.

Inline Stainless Steel Pumps.

For fluids similar to water and cutting oils etc that have a low viscosity, are corrosive and non air-drying.
<Ex.> Water, Cutting oil, etc.

Divorced Stainless Steel Pumps.

For fluids like chemical agents and acids etc, that are corrosive and air-drying. Teflon packing is used in these pumps. *
<Ex.> Chemical agents, etc.
*PTFE packing is used.

HIGH PRESSURE SUPPLY PUMPS

Inline Pumps.

Used for high viscosity materials like grease and putty. The material must provide a certain amount of lubrication and be non-corrosive.
<Ex.> Grease

Divorced Pumps.

Used for highly viscous materials that are air-drying similar to adhesives ink putty and grease. The material must be non-corrosive to the pump.
<Ex.> Adhesive, Putty, Ink and Grease

Pump Selection Guide

Pump Ratio

The pump ratio is the ratio between the effective areas of the air motor (A) and of the lower pump (B). Where the area (B) is usually indicated as the base (i.e., as 1). For example when A is 100cm² and B is 20cm² the pump ratio would be 100:20 or 5 times 1, (=5:1). This ratio is one of the most important factors determining pump characteristics.

The maximum (theoretical) outlet discharge pressure can be calculated by multiplying the pump ratio by the supplied air pressure. For example if the above pump with a 5:1 ratio is used with an air supply of 0.7 Mpa, then the maximum discharge pressure would be 3.5Mpa, (= 7 times 5). By using pumps with different pump ratios even with the same inlet air pressure it is possible to achieve low to extremely high discharge pressure.

The Yamada line up of Air PoweredTM Pumps covers all ranges of pump ratio from a 1:1 to 60:1. Therefore from the same 0.7Mpa air supply, it's possible to achieve up to 42Mpa of outlet pressure. In general the pump required often depends on the viscosity of the material. To pump very high viscosity materials, a pump with a high pump ratio is required.

Performance Curve

As explained above, you can get the maximum theoretical discharge pressure by multiplying the supplied air pressure by the pump ratio. The higher the discharge pressure the smaller the pump discharge will be under the same supplied air pressure. For this reason the pump with a bigger air motor will be required as the required discharge pressure becomes higher. The air poweredTM pumps have characteristics that the discharge pressure will decrease as the pump discharge increase.

Putting all these factors together, the correlations between the supplied air pressure, the discharge pressure and the pump discharge are plotted for each pump. Their relations with the air consumption are also included in the plot. The plot is termed the performance curve, and this will provide you with the pump performance in general.

● How to use the performance curve

- Three down-sloping curves indicate the relation between the discharge pressure and the pump discharge for the supplied air pressure of 0.3, 0.5 and 0.7MPa. Choose one of the curves that corresponds to your supplied air pressure.
- Let assume here that the supplied air pressure is 0.5MPa. Then, the middle curve is used in the example
 - When the pump discharge is 0 L/min (i.e., when the outlet valve is closed), the discharge pressure (pumps inner pressure) is maximum as shown at point (A).
 - As the outlet valve is opened, the material starts flowing out, and the discharge pressure slowly falls down. The discharge pressure will be 0.6MPa when the pump discharge reaches 20 L/min (point B.)
 - A further increase in the pump discharge to 30L/min will lower the discharge pressure to 0.4MPa (point C.)By referring to this figure, it is possible to see if a particular pump can provide the required pump discharge and discharge pressure. If the required pump discharge of a particular pump falls into the blue zone in the figure, then the pump is not suitable for the continuous operation. If the is the case, please choose the pump with bigger capability.
- These curves also show the air consumption for the supplied air supply pressure of 0.3MPa, 0.5MPa and 0.7MPa. As you can see, the air consumption is 200L.min when the supplied air pressure is 0.5MPa and the pump discharge is 20L/min (point C.)

Pump Selection Guide

Construction and Features

● AIR POWERED™ pump

The Yamada reciprocating pump series is comprised of pumps with air motors ranging from 50 to 250MPa in size, and ratios from 1to1up to 55to1.

● AIR REGULATOR

An air regulator is used to control the air pressure supplied to the pump.

● Lift

A pump fitted with an airlift is designed so that it can be raised using compressed air enabling the material container to be replaced with ease. The second type of airlift (air ram type) is designed especially for high viscosity materials and as well as being able to raise the pump are also able to forcefully press down on the material to help with feeding.

● SUCTION TYPE

●Shovel type

Shovel type pumps are designed to supply highly viscose and semisolid materials. The pumps shovel, scrapes up material and sends it into the foot valve for delivery. High viscosity material pumps of this kind include both double and single action types. Single action types scrape up the material on the up stroke and deliver it on the down stroke.

●Ball type

Ball type pumps are especially designed to pressure feed low viscosity fluids. The foot valve has a large ball that is designed to deliver a large volume at full power. The most common ball type valve is a double action type that pumps fluid on both the up and down strokes. High viscosity airless supply pumps and oil supply pumps fall into this category.

● GLAND SEAL TYPE

●Packing seal Type

This type of pump is suitable for paint and grease. Rubber packing is used in the gland seal section.

Pump Selection Guide

● INDUCTOR PLATE

Some Yamada Pumps are fitted with an inductorplate. Semi solid and highly viscous materials are of a nature that they adhere to the inner wall of their container. They also tend to make a cavity around the pump inlet and generally cannot be pumped smoothly. When using an inductorplate it sticks to the surface of the grease and an airtight seal is created. When the pump is operating a vacuum is formed inside the material container and thus pulls the inductorplate down. As the grease level decreases the plate will also move down the inside of the container. This action is combined with either downward pressure from the weight of the pump or if required by using a ram inductor to force the material down. These 3 forces (vacuum, weight or force) constantly push the material up to the pump inlet, and thus facilitate the transfer of material effectively. The airtight seal also prevents contaminants or dampness from entering the drum as well as enabling the total use of the containers contents preventing wastage.

Low Pressure Supply Pumps

Accessories

803488, 802857, 802373

Bung adapter

Adapter for inline drum pump for mounting to bung hole (2") of 200L drum

803488

Material: ADC12

Fits pump: DR-50A1, DR-90A3, DR-110A5

802857

Material: ADC12

Fits pump: DR-110A5, DR-90A3, DR-110A5

802373

Material: SUS304

Fits pump: OPG-1DR SUS, DR-125B13 SUS

800400

800400 MTB-SH Mounting bracket

Bracket for inline siphon pump for mounting to the wall

Material: ADC12, SPCC

Mounting holes: 4- ϕ 11.5 (W84mm x H100mm)

Fits pump: SH-50A1, SH-90A3, SH-110A5, SH-125A13

802553

802553 AR-110A Air regulator

Adjustable range: 0.1MPa to 1.0MPa

Inlet: G1/4" with PS-20PM Air Coupler Plug

Outlet: G1/4"

Fits pump: 90 and 110 series

850126

850126 SCK-200D Suction Tube Hose Kit

Suction tube with bung adapter and hose (3/4"-1.8M) kit for siphon pumps for mounting to bung hole (2") of 200L drum

Tube material: STKM12B

Hose material: NBR

Connection: Rc1-1/2"

Liquid Level Alarm Series

Low Level Alarm

When the liquid level reaches a predetermined limit, this fully-pneumatic liquid level sensor shuts the air supply to the pumps automatically and it blows the whistle instead.

The Low level alarm can protect the pump from dry-running, and can prevent the mixing of bubbles into the material.

It can be mounted to the bung hole (3/4") of 200L drum directly.

Material of detecting tube: Brass

Specifications

Model No.	480007
Model	SA-4100 Low level alarm
Type	Lower limit detection
Air pressure	0.25~0.7MPa
Air consumption	Max. 1000 L/min (ANR) (at 0.5MPa load)
Max. viscosity	Less than 2.5Pa·s (2,500cPs)
Weight	2.2kg
Accessories	PS-20PM Air coupler

High Level Alarm

When the liquid level reaches a predetermined limit, this fully-pneumatic liquid level sensor shuts the air supply to the pumps automatically and it blows the whistle instead.

The high level alarm can prevent the overflow of drums and tanks.

It can be mounted to the bung hole (3/4") of 200L drum directly.

Material of detecting tube: Brass

Specifications

Model No.	480008
Model	SA-4110 High level alarm
Type	Upper limit detection
Air pressure	0.25~0.7MPa
Air consumption	Max. 1000 L/min (ANR) (at 0.5MPa load)
Max. viscosity	Less than 2.5Pa·s (2,500cPs)
Weight	2.2kg
Accessories	PS-20PM Air coupler

Pressure Relief Valve

If the internal pressure of the pipe rises significantly due to change of environmental temperature, it may cause of damage of the pipe and pump. When the internal pressure reaches certain level, the relief valve opens and protect the piping and pump from a damage. Oil from the pressure relief valve is returned to the drum via the return hose.

802781 RS-SA Return hose adapter

When installing the Level alarm and Pressure relief valve, please use the RS-SA return hose adapter.

Low Pressure Supply Pumps

High-Low Level Controller

This unit is used to control the high and low levels of liquid being pumped into or out of a container.

This device is driven by compressed air and is therefore suitable for use in highly explosive environments.

The system is also designed to work in many harsh environments, e.g. areas with high temperature, high humidity or even areas where there are high electromagnetic fields.

It can handle any liquid with a viscosity of less than 1000cps.

1. Liquid is pumped to raise the level in the tank.

2. When the liquid reaches the upper preset limit the controller stops the supply of air to the pump to shut off the flow of liquid.

2. When the liquid level reaches the lower preset level the air supply will be started to resume the flow of liquid from the pump.

3. The liquid level becomes lower.

Model No.	Model	Supply Air Press.	Output Air Flow	Viscosity Limit	Weight
480005	SA-4150	0.3-0.7MPa	Max 300L/min	1Pa·s or less	6kg

HIGH PRESSURE SUPPLY PUMPS

High Pressure Supply Pumps

Applications

TUNNEL BUILDING

High-pressure supply pumps are driven by compressed air, not electricity and are therefore very safe. They are often used to lubricate the drive trains of vehicles or machines, and due to their high-pressure output are used for sealing or plugging of tunnel walls against water seepage.

GREASE METERING

By using a pump unit fitted with a grease meter, it is possible to carry out accurate and efficient lubrication. Used for applications such as metering systems and bearing grease packers, they are commonly used in the manufacturing and vehicle industries.

Bearing grease applications

Using this system grease can be supplied from the pump usually through a special metering device directly into the bearing of a vehicle. A variety of systems and different guns and outlets are available.

CENTRALIZED SEALER

This type of pump can be used for adhesive and spot sealing applications and is often seen in mass production plants. Material can be piped to any point in the plant thus the entire plant space is used effectively. Often used in conjunction with a flow control valve etc.

APPLICATION OF SEALER AND CAULKING

By connecting a hose and flow gun to a portable high-pressure pump unit, a uniform and smooth delivery of material can be carried out efficiently at any location. This type of unit saves on time and material costs and is very efficient.

Inline High Pressure Supply Pump Unit 50×1 ratio

SKR110A50PAL

The SKR110A50PAL is the successor model of SKR110M50SAL that is one of bestseller of Yamada.

Proven and reliable 110 series high performance Air-Powered® pump is fitted with inductor plate and pneumatic ram lift.

This is one of the most highly efficient and extremely versatile grease pump units for manufacturing line use.

Material outlet: G1/4

Air inlet: Rc1/4 with PS-20PM Air Coupler

- Successor model of SKR110M50SAL
- Proven and reliable 110 series Air-Powered® pump
- Low-profile pump lift
- Flat shaped base
- Complies with CE

High Pressure Supply Pumps

●Optional Accessory

Model No.	Model		
805016	IDP-PAL/PM Inductor plate (Punching metal type)		A perforated metal plate is attached to the bottom of the inductor plate. This reduces the amount of material remaining within the pail as much as possible, allowing the material to be used to the end. Suitable for grease with relatively low viscosity. ●When using standard inductor plates  Heap of residual grease in the center of the pail ●When using perforated metal plates  No grease remains in the center of the plate, and the grease is almost completely induced into the plate.
805143	IDP-PAL/PL Inductor plate (Double packing specification model)		The double-layered packing prevents grease from leaking from the side of packings. The sealing performance exceeds standard specification models, reducing the amount of air entering pail-cans and residual material remaining on the inner surface of containers. Suitable for grease with relatively high viscosity.
805019	ST-PAL		The product serves as a reference for non-slip pails and installation locations, facilitating the installation of inductor plates on the pails.

Inline High Pressure Supply Pump Unit 50x1 ratio

HPP110A50

110 series high performance Air-Powered® pump fitted with drum cover and follower plate. An airtight seal created by the follower plate helps with the delivery of material into the pump suction. Suitable for soft grease (NLGI No.0-1).

Divorced High Pressure Supply Pump Unit 65x1 Ratio

SR180P65PWAL-T (Tube type inductor plate)

The pump unit is suitable for transferring materials with extremely high viscosity.

The high pump ratio allows for the achievement of high discharge pressure even with low pressured air supplies. To prevent the fixation of anaerobic materials such as sealants and putty, a solution container cup is attached to the gland section.

Product Overview

-T: Tube type inductor plate

Suitable for normal grease (NLGI No.1-3).

The high sealing properties of the packings makes this model suitable for extremely high-viscosity materials requiring the pressurization of the lift.

Accessories (For high pressure supply pumps)

Pail empty detection sensor

687062 SR140-SW

It can be mounted on air cylinders of the lift to send out external signals when the lift is at a desired height.

Oil cup

716900 Oil cup

682771 Valve

685775 O ring

(Sold as a set of three.)

When using high-viscosity materials such as adhesives, filling the cup with solutions prevents the material from oozing out of the plunger and fixing.

High Pressure Supply Pumps

Control Valves and Accessories (For high pressure supply pumps)

851985 HPG-G High Pressure Grease gun

Ideal for maintenance of various equipment and facilities, greasing up, and grease filling of products in production lines.

850K127 KGK-127EF Flow Gun

This pistol type flow gun is compact and lightweight and has a special device in the valve control (open/close) mechanism, which allows an operator to operate the lever with ease even under the high pressure.

Material inlet: Rc1/4

Normal operation pressure: 40MPa

The swivel joint available.

853502 GMN-500 Digital Grease Gun

The digital Grease Meter GMN-500 is equipped with an Over Gear weight meter and a digital display. It helps and improves lubricant management for all kinds of applications from heavy industry to assembly plants.

● Specifications

Model No.: 853502 / Model: GMN-500 / Maximum operating proof pressure: 55MPa

Maximum operating temperature: 60°C / Measurement accuracy: +/-3% / Weight: 0.98kg

Power supply: Two AA batteries / Unit shown on LCD display while in operation: g and total kg

Functions: Zero reset and calibration functions

Automatic Metering Valve: KGK-100 Series

The KGK-100 series-metering gun is accurate from 1mL to 20mL and suitable for metering, dispensing or applying grease or adhesives. Once the volume has been preset, this unit with a simple pull of the trigger will dispense the required amount of material accurately and efficiently.

Material — Grease (Oil) Adhesive (only with the gun with PTFE packing)

Metering range — 0 to 20mL (See next table for details)

● For grease (NBR packing)

Model No.	Model	Metering range (mL)	※A Dimensions (mm)
686427	KGK-112	0.3~1	255

686436	KGK-117T	5~20	347

Automatic Flow Valves

The valve in this automatic flow gun is controlled (open/close) by air pressure and the gun can easily be operated in synchronous with the production line.

803685 AF30M-15A Valve ratio 45x1

Material: Max pressure 30MPa, Port size Rc1/2

Air: Max pressure 0.7MPa, Port size Rc1/4

804001 AF20M-25A Valve ratio 30x1

Material: Max pressure 20MPa, Port size Rc1

Air: Max pressure 0.7MPa, Port size Rc1/4

804023 AF20M-25AS (with sensor) Valve ratio 30x1

Material: Max pressure 20MPa, Port size Rc1

Air: Max pressure 0.7MPa, Port size Rc1/4

Sensor: DC12~24V with double wire (2m)

686437 KGK-02AFG

Material: Max pressure 20MPa, Port size Rc1/4

Air: Max pressure 0.7MPa, Port size Rc1/4

High pressure regulator

686438 KGK-106HR(1-6MPa)

686439 KGK-313HR(4-13MPa)

686440 KGK-820HR(8-20MPa)

Pressure regulator for heavy viscosity material.

Max pressure:30MPa

Pneumatic discharge nozzle

686442 KGK-097AV Automatic nozzle

686443 AV-6162 Nozzle

It is used if discharge point is far from metering valve.

Max pressure:20MPa

High Pressure Supply Pumps

Automatic Metering Valve: KGK-400 Series

The KGK series metering valves can discharge preset amount of grease or adhesive with single action by pneumatic 3-port valve.

The material is extruded by a piston after being charged in the metering cylinder.

"MS" series, which is equipped with piston stroke sensors, can output signal of charge/discharge completions.

Silicon grease spec is also available.

<Usable media> - Grease (KGK-400M&MS series)

Adhesive (KGK-400T series)

<Metering range> - 0 - 100mL

● Working Principle

Pumped material is charged to the metering cylinder.

When the metering valve receives actuation air, the air piston opens the switching valve. The pumped material, reversely, pushes metering piston from behind, and material in the metering cylinder is discharged.

The metering range can be adjusted by stroke length of the metering piston.

REMARKS

- ✓ Charging time is required between material discharges.
- ✓ Please consult Yamada for models with metering range more than 100mL

851058S	KGK-405M for Silicon Grease	2~5	154.5
686409	KGK-406M		
851059S	KGK-406M for Silicon Grease	4~10	186.5
686410	KGK-407M		
851060S	KGK-407M for Silicon Grease	8~20	259.6
686411	KGK-408M		
851061S	KGK-408M for Silicon Grease	15~50	285.5
686425	KGK-409M	40~100	-----

● For adhesive (PTFE packing, Metal sealed)

Model No.	Model	Metering range (mL)	※A Dimensions (mm)
686412	KGK-402T	0.2~1	104
686413	KGK-404T	0.3~3	118
686414	KGK-405T	2~5	118
686415	KGK-406T	4~10	163
686416	KGK-407T	8~20	212
686417	KGK-408T	15~50	261

● For grease (NBR packing, Metal sealed) with limit switch

Model No.	Model	Metering range (mL)	※A Dimensions (mm)
686418	KGK-401MS	0.05~0.5	176.5
686419*	KGK-402MS		
850K214S*	KGK-402MS for Silicon Grease	0.2~1	135
686420*	KGK-404MS		
850K215S	KGK-404MS for Silicon Grease	0.3~3	170
686421	KGK-405MS		
850K143S	KGK-405MS for Silicon Grease	2~5	196.5
686422	KGK-406MS		
850K151S	KGK-406MS for Silicon Grease	4~10	215
686423	KGK-407MS		
850K222S	KGK-407MS for Silicon Grease	8~20	259
686424	KGK-408MS		
850K221S	KGK-408MS for Silicon Grease	15~50	326
686426	KGK-409MS		
850K223S	KGK-409MS for Silicon Grease	40~100	-----

*The sensor (limit switch) on the models 686419, 686420 and 850K214S is OMRON's E2CX2A. As for the amplifier unit for these models, please use E2C-AK4A (which is an optional part.) The sensor on the other models is OMRON's Z-15GW22B.

Principle of Operation

Standby mode

Material is forced into the metering valve and due to pressure the outlet is closed and the metering cylinder is filled with material. Due to material pressure the metering piston is always being pushed forward. (To the left in the above figure.)

Start of discharge

Once the air switch is triggered and air enters the meter, the air piston is pushed down, the material inlet port is closed and the material discharge port is opened. The piston then moves (to the left in diagram) and discharges the material contained in the metering cylinder.

Completion of discharge

The metering piston completes its stroke and the entire amount of material is discharged.

Return to standby

Once all air has been exhausted, the material discharge valve is closed and material moves into and totally fills the metering cylinder pushing the piston back to the original position.

REQUEST SHEET

YAMADA CORPORATION
International Department

E-mail: intl@yamadacorp.co.jp

For help and recommendations for pump choice and applications, please complete this form with as many details as possible.

Please send it by fax to Yamada Corporation and we will get straight back to you.

● Are you already using Yamada products ? (YES•NO)

● Have you dealt directly with Yamada Corporation in the past ? (YES•NO)

● How did you learn about Yamada Corporation.

()

Purpose of this request.

- ☐ Request for technical information.
☐ Request for quotation.
☐ Request to purchase products.
☐ Request for more information.
☐ Request for catalogues of flyers.
☐ Request for local dealer contact details.
☐ Other.

Company

Address (with Postcode):

Phone: ()

Fax: ()

Department/Section/Group:

Name

To: YAMADA CORPORATION, International Department

Please provide a sketch of your system including as many details as possible

- 1) Potential product: Model _____ Diameter _____ A _____
- 2) Objectives: _____
- 3) Specifications of fluid:
- | Name | Fluid properties | Concentration | % |
|---|------------------|----------------|-----------------|
| Specific gravity | Viscosity | cp | Temperature °C |
| Slurry included? ☐ Yes / ☐ No | | →Concentration | Wt% Diameter mm |
- 4) Pump output (Flow rate) Nominal rate _____ /min _____ /hr Max. rate _____ /min _____ /h
- Total stroke _____ M MPa
- Ambient temperature _____
- 5) Fluid container: ☐ 200L Drum container ☐ 20L Pail container ☐ 18L square container
- ☐ Custom container: Specifications _____
- 6) Operation conditions: ☐ Outdoor / ☐ Indoor
- Operation frequency (How often do you run your pump?) Continuous / Intermittent hr/day or hr/week or hr/month
- 7) Air supply condition: _____ MPa
- 8) Number of units: _____ unit(s)
- 9) Expected commercial conditions _____
- 10) Other requirements _____

CAUTION WHEN SELECTING A PUMP

Yamada offers a large range of Air Operated Pumps to cater for many different kinds of materials and conditions. When selecting the most appropriate pump for a particular selection and installation please consult your local Yamada Pump Distributor or Yamada Corporation.

Your Local Distributor:

All product specifications and data are subject to change without notice.
